EV SUPPLY CHAIN

# Your BOM changes faster than your planning system can keep up.

Building motors, controllers, or battery packs for the EV transition? You're not managing a supply chain. You're managing a moving target.

THE PROBLEM

# One revision. Last quarter's plan, gone.

- **New chemistry or controller rev?**
  The plan is obsolete overnight.
- **Basic ERP + spreadsheets.**
  Still the norm for most EV component makers.
- **No concurrent planning layer.**
  Demand, supply and inventory stay disconnected.
- **What-if scenarios done by hand.**
  Alternate sourcing, capacity, ramp timing. If at all.

Simbus
Simplifying your Business

THE SOLUTION

# Kinaxis® Planning One™. Built for volatility.

## Maestro platform

Purpose-built for fast-moving BOMs and supplier changes.

## Instant impact modeling

BOM shifts? Model the effect now. No spreadsheet rebuild.

## Concurrent S&OP

Demand, supply and S&OP synchronized in real time.

Everything stays in sync. Even as the BOM keeps moving.

WHY SIMBUS

# 16 weeks

from spreadsheets to full production go-live

**No pilots.  Real system from day one.**

Simbus moves you from legacy planning tools to Kinaxis® Planning One™, live, with scenarios ready to run.

## Let's talk about a scenario-ready supply chain.
